One working end of the rasp operates by pushing, the other by pulling.

OBWEGESER
19 cm / 7 3/4"

Bone splinters are pushed through the perforated working ends. This avoids plugging of the rasps and they can be cleaned easily.

Tupperts Universal Hand Holder and Retractor Set enables the surgeon to fixate the hand in any position needed. The patient's hand is held absolutely firm and allows unhindered work under the microscope. Ball chains of varying length with sSIn or tendon hooks fixate the hand and lower arm on the Hand Holder. Due to the slots around the Hand Holder, retraction in every direction is possible. Upward retraction is easily achieved with the elevated chain holders. The special container is designed for easy handling and safe storage.
